# Body for More User Value

Unique and easy to handle centrifugal self-locking system accurately locks the knives in place.

Run out less than 0.04 mm. Surface finish is superior especially when used in conjunction with PowerLock-System.

PowerLock ENSHIN is a mono-block tooling in steel for highest rigidity, excellent runout, longest use life and tested for RPM of up to 12500min<sup>-1</sup>.

Bore-type ENSHIN is made of Aluminum for light weight, but with high durability and longest use life and tested for RPM of up to 8000 min<sup>-1</sup>.

Closed round shaped body ensures a quiet work environment.

Tap the wedge gently

Turn the safety stopper ring

Slide out the knife

## Application

Orange Ultra fine planing Green Fine planing Yellow Rough planing

Knife Grade	Material	Regrinding
HS-HP	Softwoods	Can not be reground
HW	Hardwood, Tropical wood	0.7 mm at the back side (grinding fixture available)

Due to the knife features, all heads are suitable to cut hardwoods as well as softwoods. Different hook angles for different materials are not required.

# Technology

Advanced Material Technology treated cutting edges stay sharper longer.

The pictures above show the pores of oak after a cutting path of 100m. The HSS cutting edge is already a little blunt and instead of cutting the pores cleanly, it compresses the fibers.

Advanced Material Technology still cuts the pores cleanly, also when cutting against the grain.

An uncoated edge wears out quickly. The blunt cutting edge tears out the grain and does not give a satisfactory cut finish.

Advanced Material Technology is an implantation into a substrate material. In case of planer knives it is applied to the rake face of a HSS substrate.

Advanced Material Technology treated cutting edges stay very sharp for a very long time. Only little traces of wear in form of a chamfer on the back and small rounding on the face appear during the time of use.

HSS cutting edge after cutting 1000m of Spruce

HS-HP cutting edge after cutting 1000m of Spruce

## Knives for More User Value

Every knife has two cutting edges in reversible design, which makes the ENSHIN a very economical tooling solution.

Knife quality HS-HP is high speed steel treated with Advanced Material Technology. Advanced Material Technology provides up to 5 times longer edge life compared with regular HSS knives when planing softwoods.

For planing of hard and tropical timber, carbide knives (HW) provide excellent lifetimes in correlation with finest surfaces.

Every knife has a chip breaker for finest surfaces even when cutting against the grain direction.

Every cutting edge is finely lapped, which ensures perfect cutting results even when planing twisted grained timber.

HS-HP knives are for single use. No edge life loss after grinding, no inconsistent cut quality but high process stability and trouble free working.

# Sizes

## Bore Type Heads

For up to 8000 RPM it is also possible to mount a regular bore type ENSHIN onto an arbor with PowerLock interface.

After secure assembly of the arbor and the ENSHIN, the entire system is balanced in order to ensure highest planing quality and work safety.

Regular arbors and hydro arbors are available. For more details please contact Kanefusa.

Code No.	(D)	(L)	Size (d)	(Z)	N max

9 789-B636-500	125	230	1 1/2"	x 4	8000

## PowerLock Heads

The body diameter of the PowerLock ENSHIN is 90mm. The mono-block body is pre-manufactured by Weing S.A. of Switzerland and completed by Kanefusa Corporation Japan. This ensures the highest standard in precision and quality. Equipped with HS-HP knives, the outer tool diameter will be 93mm. Because HW knives are wider, the outer tool diameter will be 93.7mm. Either diameter fits Powermat machines.

Code No.	(D)	Size (L1)	(L2)	(Z)	Type	N max
